Frogs

A frog is an amphibian. Amphibians are an animal type that have slimy, wet skin. A frog has different stages of its life cycle. The first few steps, the frog actually spends much of its time underwater. When a frog is a tadpole, it acts just like a fish. It is not until the tadpole starts to grow arms and legs does it start to live outside of the water. Frogs are great jumpers. They have very long legs that help them jump.

What type of skin do amphibians have?

What part of a frog's life is spent underwater?

How does a tadpole become a full-grown adult?

- ☐ A. It swims.
- ☐ B. It has wet skin.
- ☐ C. It is a great jumper.
- ☐ D. It grows arms and legs.

Name: _____
